PROJECTS

HOSPITAL MANAGEMENT SYSTEM

ROLE- DATABASE DESIGNER

DESCRIPTION- This project is prepared by using JAVA swing and SQL server which is incorporates various factors needed for smooth working and management of a hospital. This hospital management system allows administrator to store and manage various products and related data. This includes the beds/normal accommodation/ICU accommodation as well as patient data. In case a new patient arrives, the administrator may check for bed availability in various hospital departments and allocate it accordingly as per the patient need. The system also stores the patient data in a well de ned manner. The patient details include his name, number, address and various health parameters. The software system uses JAVA Swing to design an interactive GUI and an SQL server to store its back end data. This back end data includes accommodation details and even related patient data for e ctively managing a hospital. The entire Project is totally administrator and client basis.

ACHIEVEMENTS & AWARDS

University Gold Medalist for the Academic performance in MCA.
