## Projects

- Face Recognition Attendance System**
  - In this project, we developed an app that will mark attendance by face recognition.
  - This app will ensure that it detect only those students faces which are currently present in the class through which there is no chances of false attendance.
  - It is biometric technology to identify or verify a person from a digital image or surveillance video.
  - We use Spider for making this app and dataset for images.
- Task Management Project**
  - In this project, we developed an app that we can add the daily or weekly task on that app.
  - We can search our task also.
  - In this we use HTML, CSS, JavaScript.
  - We use Visual Studio Code for making this project
- Nutra-Fit Master**
  - In this project, we developed an website that is based on fitness and wellness.
  - This website has information about different exercise and diet plans and we can also create account of user.
  - In this we use HTML, CSS, JavaScript.
  - We use Visual Studio Code for making this project.
