PROJECTS

Marine Port Management System

- Efficiently manages ships, routes, and ports. Tracks ship types, availability, and employee assignments. Ensures smooth operations and optimizes logistics in the maritime industry.

Web-Based Stock Price Prediction Application

- A responsive web application for users to predict the stock market trends that compares the fluctuations in predicted and original stock prices.

Intrusion Detection System

- An IDS System that detects different types of attacks on Software Defined Networks. The proposed system is designed using InSDN dataset, based on Artificial Neural Networks.
