Academic Project details

Title: Emotion classification using deep Learning

Duration: 4 Months

Description: The purpose of the project is to find whether the person is in what state of emotion whether he is in happy, sad, angry, or neutral by using the features extraction . In this this project we are using the concept of cnn algorithm. we will use the libraries librosa, soundfile, and Tensorflow and keras Deep learning frameworks to build a model using an Artificial Neural Network Classifier. This will be able to recognize emotion from face data set. We will load the data, extract features from it, then split the dataset into training and testing sets.

Extra-Curricular Activities

- ❖ Participated in 5 paper presentations
- ❖ Participated in "Embedded System" workshop conducted by S. K. R Engineering college in chennai.
- ❖ participated in games while studying

Personal Traits

- ❖ Taking initiative and working as part of a group or independently.
- ❖ Updating the skills as per the industry standards.
- ❖ Enthusiastic in working with new technologies and new applications.
- ❖ Adaptability to change environment.
