PROJECTS

MovieMaster:

- This website is created using HTML and CSS, its a responsive and dynamic website that can be accessed from any devices
- This website was designed with a focus on user experience
- My experience in HTML/CSS ensures a seamless flow and design in the website

GrillitNow:

- Developed an innovative, responsive website for a premium meat delivery service, elevating their online visibility and customer interaction
- Utilized React.js to craft a dynamic and engaging user interface, enriching the website's capabilities.
- Ensured mobile accessibility for on-the-move convenience, catering to the diverse requirements of meat enthusiasts.

SwiftSend:

- Engineered a courier service webpage using React.js to provide users with a seamless and intuitive experience.
- The modern and responsive design ensures that clients can effortlessly access and navigate the platform, whether on a desktop computer or a mobile device.
- Developed a flexible system allowing users to choose from a range of delivery options, including express, standard, and scheduled deliveries, providing them with personalized choices to meet their specific needs.

CarService E-Commerce:

- Developed a highly responsive and user-friendly E-Commerce platform using React.js, offering customers a seamless and intuitive shopping experience for automotive parts and services.
- Implemented a comprehensive product catalog, categorized for easy navigation, featuring a wide range of auto parts, accessories, and services, providing customers with a one-stop solution for their car maintenance needs.
- Utilized React.js to implement a personalized recommendation system that suggests relevant products and services based on customers' browsing and purchase history, enhancing upselling and cross-selling opportunities, and improving customer engagement.
- This website uses add to cart functions and checks out onto whatsapp and doesn't need backend

GroHub APP:

- Developed the GroHub app with React Native to provide users with a streamlined and efficient grocery shopping experience. Its user-friendly interface allows customers to browse, select, and purchase groceries with ease.
- Implemented a personalized shopping list feature that enables users to create and save custom shopping lists for quick and convenient reordering. This feature simplifies the grocery shopping process and improves user retention.
- Integrated multiple grocery stores and retailers into the GroHub app, giving users access to a wide range of products and brands. This diversity of options ensures that customers can find the items they need and choose their preferred stores for delivery or pickup.
