Qualitative Tools to Analyze Films - Project

CERTIFICATES

Operating system-Coursera

Software development processes and methodologies

Full Stack Development - JAVA

PERSONAL PROJECTS

Multi Model Approach to Film Analysis - A multi-model approach to film analysis employs a diverse set of analytical methods to comprehensively interpret and understand a movie. This includes examining textual elements like dialogue and script, visual components such as cinematography and auditory aspects like sound design and music. By integrating these various models, analysts gain a holistic understanding of the film's narrative, aesthetics,

and cultural context, enabling a more nuanced and enriched interpretation of cinematic storytelling. This approach recognizes the multi-layered nature of films and seeks to capture the complexity inherent in their creation and reception.

Ticket Reservation System - The ticket reservation system is a digital platform designed to facilitate the seamless booking of tickets for various events, such as concerts, movies, or transportation. Users can access the system online, browse available options, select preferred seats or times, and securely complete the reservation. The system incorporates features like real-time availability updates, payment processing, and confirmation notifications, ensuring a user-friendly and efficient ticket booking experience. Additionally, it often includes administrative capabilities for event organizers to manage bookings and monitor attendance.

ACHIEVEMENTS

2nd position in School level Quiz competition

Participated in NTSE (National Level Talent Search Examination)
