INTERNSHIP

Internship: 1stop.ai (Raise Digital)
05/2022 - 08/2022

As a part of this internship program , I developed the basic E-Commerce application for booking movie tickets. I used my technical skills like HTML , CSS for the front-end development and javascript for the user-interaction effectively. In this internship I gained knowledge of project structure , proper usage of IDE and coding skills.

PROJECTS

Mini Project : Employee Data Manager

05/2022 - 06/2022

This is core java-based application. This app focuses on Employee Data Management activities. It creates a unique ID for each employee input and stores the records based on user input. The data manager or user Can see the employee details by giving them employee ID's which are already stored on the machine.

SKILLS USED : Core java

Major Project : Cyberbullying Detection Based On Semantic Analysis

01/2023 - 04/2023

This is a core java-based application. This app focuses on one of the side effects of social media called Cyberbullying. It automatically detects and removes bullying messages against the victim, which could help to construct a healthy and safe social media environment. In this application we used the Machine learning techniques such as **Semantic Analysis**. Based on the semantic analysis of messages, the sender would be reported as spam and can be blocked if there are any discriminative or bullying Messages.

SKILLS USED : Core java , MYSQL
