Student

Skills

- **Lang:** C,C++,Java, SQL
- MATLAB, Verilog
- Digital Circuit Design
- Linux, Windows

Projects

Mini Project

Smart Attendance System Based On Face Recognition

- The conventional method in practices a time-consuming process and there is always a chance of proxy attendance, thus the automated process of marking attendance for the students present in the classroom helps in saving the time of the lecture.

Major Project

Automatic Pillbox And Assistive Technology Device

- It is an Assistive Technology in order to reduce the need for formal health services. Our project has given a basic insight into the bridging of technology and medicine. We have a designed a pill dispenser. Lastly the dispenser will visually and audibly notify the patient about the pills dispensation, and will also store the time of day when the patient took his or her medications.
