Nagavalli school	Percentage: 83%

Projects

Hospital management system - Date: June 2021 – August 2021

Acted as a team leader and key player in the project development. Made a clear front-end designing and documentary on E-Commerce website that includes the shopping information and makes online booking by checking the product availability. This project task is to create a website to interact with the customers and easy bookings. We used HTML, CSS, PHP for designing the page to interact easily, also used MYSQL(in BACKEND) to store the information.

Hospital information Web page – Date: June 2021 – August 2021

The central idea for a hospital information project could be to improve the overall efficiency, accessibility, and quality of healthcare services by creating a comprehensive and integrated digital platform that facilitates the seamless flow of information within the hospital environment. This project could encompass various aspects, including electronic health records (EHRs), patient management, resource allocation, communication, and data analytics. The goal is to enhance patient care, streamline administrative processes, and support medical research through the effective use of technology and information systems in a hospital setting.
