## PERSONAL PROJECTS

### Vehicle Insurance Management System (03/2022)

- The purpose of the vehicle Vehicle Insurance Management System is to automate existing manual with the help of complete trashed equipment and full-fledged computer web application, fulfilling their requirements so that their valuable data or information can be stored for longer periods with easy accessing and managing.
- The main objective of the project on Vehicle Insurance Management System is to manage the detail of customer insurance vehicle, vehicle type and vehicle maker.
- It is developed on PHP with HTML, CSS, Bootstrap as frontend and MySQL as database.

### E-BAZAAR (10/2022)

- The software allows online shopping customers to accumulate a list of items for purchase, described metaphorically as "placing items in the shopping cart" or "add to cart." Upon checkout, the software typically calculates a total for the order, including shipping and handling (i.e., postage and packing) charges and the associated taxes, as applicable.
- The objective of the E-Bazaar is to provide better information for the users of this system for better results for their maintenance in the product details that is sales, purchases and stock.
