Projects and Publications

Final Year Project
Covid Safe: An IoT-Based System for Automated Health Monitoring and Surveillance in Post-Pandemic Life
January 2022, Belagavi

An innovative application powered by IoT technology and advanced computerization, that revolutionizes the way patient information is collected and managed. This cutting-edge system enables doctors to monitor the evolution of their patients' conditions, access their medical history, and keep track of their treatments with ease. Additionally, patients can benefit from personalized reminders and alerts, enhancing their adherence to their recovery curve.

Publication

"An IoT-Based System for Automated Health Monitoring and Surveillance in Post-Pandemic Life," IJCRT August 2022.
