PROJECTS

Online Hotel Booking System

- It developed using HTML , CSS , JAVASCRIPT , and C# .
- The purpose of this project is to create and execute an online hotel room reservation system that will take the place of the current manual system.It offers security features, such as the restriction of access to only authorised users,that is to maintain confidentiality, authenticity and integrity of stored information. That user information should be verified with the user information stored in the database tables and if it is information matches, they should be able to access system.

Online Shopping Website

- It website developed using Javascript, CSS and HTML .
- The development of an online shopping project is suggested for customers. This website is accessible both inside and outside of the organisation with the right credentials.

Yoti Project

- It application developed using Apex, Trigger, Aura and LWC .
- The project was aimed to provide functionality to initiate e-signing process in SalesforceusingYotiSign. The implemented signing process allows user to select existing file or upload new ones, add recipients, add Signature elements to selected documents and send it with a custom email subject and message for signing.

HOBBIES

- Reading , Listening music , Dancing .
- Learn new technology .
