WORK EXPERIENCE

Internship:

- **SALESFORCE (ADMINSTRATOR):**

    Streamlined the cloud platform setup process, revising the average setup time for clients by 40%. Directed and implemented user-friendly congregation and customization, resulting in reduction in client support tickets related to usability issues.

- **SAP BASIS**

    In SAP BASIS technology, user administration involves creating and managing user accounts, authorizations, and password policies. Client administration encompasses tasks such as creating and copying clients, transporting data between environments, and refreshing test clients. Database administration focuses on maintaining and optimizing the database, implementing backup strategies, and overseeing system upgrades and patching.

UNIVERSITY PROJECTS

FACE RECOGNITION ATTENDANCE BASED MONITOR SYSTEM   Apr 2021
- Implemented machine-learning algorithms, to accurately recognize and identify individuals for attendance monitoring. Successfully processed and analyze unique faces in the dataset.
- Directed real-time attendance monitoring, allow simultaneous users to mark the attendance and track data continuously.

WEB - CHAT APPLICATION   Dec 2021
- Developed a responsive and user- friendly interface that allows user to simultaneous users to engage in real time chat.
- Supported concurrent chat rooms or channels to facilitate organized conversation and collaborations.
- The average response time of the application, measured as the time taken for a message to appear for all users in a chat room after being sent, is less than 100 milliseconds.
- On average, each user spends 30 minutes per session actively participating in chat conversations.

SMART FARMING APPLICATION   Apr 2022
- Prepared a Famish Smart-Farming Application, designed to assist the farmers in raising the queries and obtaining solutions.
- Created a user-friendly interface that enabled farmers to submit queries regarding various farming challenges.
- The application allows farmers to submit an average of 100 queries per day regarding various farming challenges.
- Farmers who submit queries use the most popular feature of the application, "Crop Disease Identification".
