PROJECT DETAILS

ROBTON

- Robton boasts a sleek and modern user interface designed with React, ensuring a visually appealing and user-friendly experience.
- Using React's capabilities, Robton incorporates interactive visualizations to help users better understand the operation and technology behind automated vehicles.
- The responsive design promotes accessibility and usability, allowing users to access the website from anywhere, anytime

FINSPIRENET

- Talk about how you prioritized user needs and preferences when designing the Finspire UI, making it intuitive and user-friendly.
- Highlight that the UI seamlessly adapts to different devices, providing a consistent and enjoyable experience on computers, tablets, and smartphones.
- Mention your proficiency in using HTML, CSS, JavaScript, React.js, Bootstrap, and Material UI to develop and maintain the web platform.

WUDKORT

- Wudkort was created by integrating HTML, CSS, Bootstrap, and JavaScript within the React JS library.
- Developed a user-friendly React-based interface for effortless furniture bookings. Employed local storage for secure data storage, eliminating complex backend requirements.
- Enabled instant booking confirmation via WhatsApp, facilitating quick and efficient communication with service providers.
- Implemented a straightforward invoicing system, allowing users to download invoices with ease after booking, without involving complex database management.

QUICKBITES

- The app features a user-friendly interface with a smooth navigation flow, making it quick and easy for customers to place their orders and pay securely.
- The app learns users' preferences over time, suggesting restaurants and dishes tailored to their tastes, enhancing the overall dining experience.
- The app ensures prompt and reliable food delivery services, keeping users informed about the status of their orders in real-time.
