PROJECTS

Random number guessing game
- Code is written using JavaScript in which system generates a random number, the user need to enter his guess number till he matches to the system.

My Diary project
- Using Spring MVC a diary is made in which user can enter his important information in a particular date
- We also provided Registration and Login page in order to access the diary

Reaction Timer using JavaScript
- A bubble game developed using JavaScript which displays the time in milliseconds when we click on the bubble.
- The fast we click the less time it shows . The bubbles appear in different colors at different positions of the screen in different sizes.
