PERSONAL PROJECTS

QR Based Smart Parking Vehicle System
Implement the system that allows drivers to find parking slots online and reverse it. The drivers use this system on their personal devices having the android. It eliminates the drawbacks of existing system like use of RFID, LED, and IR sensors

E-Commerce (New Arrival)
This project focuses mostly on the online purchasing and other similar activities. In order to perform various actions in this web application, the customer must first register. A consumer can control his or her order from the account area once he or she has completed the checkout procedures.

Hospital Management System
In this, system enabling hospitals to manage information and data related to all aspects of healthcare - processes, providers, patients, and more, which in turn ensures that processes are completed swiftly and efficiently.

YOGAA
In this website, we helped the client understand their target audience. We also explored how to evolve their dream into a unique and compiling brand identity and message.

Courier Management System
This project is the incorporation of appropriate technology to help managers manage information from one place or person to another place or person.
