Project Details:

Project 1 Name: Debt Management
Domain: Finance
Roles: Smoke testing, Sanity testing, Functional testing, Regression testing, Integration testing, Database testing, Retesting.
Description:
It is a web application which is designed and develop to perform daily activity of debt collection, to remind debtors of their payment obligation and keep them.
It provides a comprehensive platform for tracking, analyzing, and managing various types of debts from debtors. By using debt management processes, improve communication and transparency, enhance compliance, and ultimately facilitate successful debt recovery efforts for businesses and organizations. The application should allow users to manage debtor information, including contact details, outstanding debt amounts, payment history, and any relevant notes or communications. Users should be able to track the status of outstanding debts, view payment schedules, monitor payment history, and receive notifications for missed or upcoming payments.
Here my roles to understanding the requirements and identifying the scenarios, write test case review and execute test cases, track and report defect, Prepare summary report.

Project 2 Name: Property Shine
Domain: CRM
Roles: Smoke testing, Sanity testing, Functional testing, Regression testing, Integration testing UAT, Retesting, Database testing.
Description:
Property shine is the portal from which the leads for the real estate domain can be accommodate at one place and then segregate them as per the project. The portal is design in a such a way that all their leads journey from cold leads to closure can be tracked. In this portal property owners are able to manage all their properties no matter whether they want to sell it or rent it. It also gives idea about marketing expenditure and lead flow.

Responsibilities:

o Analyze Software Requirements Specifications Document.
o Preparation of Test Scenarios and Test cases.
o Conduct Test Case Review and send the review comments to teammates.
o Prepared Requirement Traceability matrix.
o Interaction with development team and BA in Defect fixing process and Regression testing and Prepared Test reports after completion of test execution.
o Logged the defects in Jira.
o Performed Database Testing at Application level.
o Responsible to complete sanity on every environment after new feature release.
